

IPA Seminar on Press-in Technology in the Philippines

Monday, 21st May 2018

WELCOME

The International Press-in Association (IPA) is an academic organization to explicate the unseen phenomena and mechanism below the ground by the press-in engineering in close coordination with various technical fields such as environmental, geotechnical, mechanical, instrumentation and construction engineering.

IPA would like to invite you to attend the IPA Seminar on Press-in Technology in the Philippines, which explains details of the Press-in Method, including design and construction aspects.

WHAT IS PRESS-IN?

In the Press-in Method, prefabricated piles are installed into the ground without noise and vibration using static loading generated from hydraulic rams. The reaction force is derived from extraction resistance of previously driven piles, allowing the invention of a small press-in machine, so called the “Silent Piler” to generate greater force by integrating with the ground. Such compact machine can work under physically restricted working conditions. The Press-in Method is originated in Japan and over the years, it has been disseminated widely across the world through successful applications. The Press-in Method has also been used in difficult site conditions in the Philippines and Southeast Asian region.

For more details and reference, please visit our website <https://www.press-in.org/en>.

OBJECTIVE OF SEMINAR

IPA aims to promote this method through collaborated effort within industry-academia-Government, and therefore we are pleased to organize a seminar in the Philippines to commemorate the release of handbook, entitled the “**Press-in retaining structures: a handbook (First edition 2016)**”. This seminar will provide guidance on the use of the handbook in the design and construction of Press-in Method.
